| Format                           | Antiserum                                                                                                                                                                                                                                                     |
| Spezifität                       | IgM (μ)                                                                                                                                                                                                                                                       |
| Minimale Kreuzreaktivität (MinX) | no cross-adsorbtion                                                                                                                                                                                                                                           |
| Produktbeschreibung              | The reactivity of the antiserum is restricted to the Fc part of the IgM molecule. In immunoelectrophoresis and radial immunodiffusion, using various antiserum concentrations against normal duck serum a single precipitin line is obtained which shows a... |
| Klonalität                       | Monoclonal                                                                                                                                                                                                                                                    |
| Klon-Bezeichnung                 | [Polyclonal]                                                                                                                                                                                                                                                  |

|                        |                                                                                                                                                                                                                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Puffer                 | Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added. Reconstitute the lyophilized an                                          |
| Quelle                 | Highly purified normal IgM isolated from pooled duck serum. Freund's complete adjuvant is used in the first step of the immunization procedure.                                                                                                                                                          |
| Formel                 | Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added.                                                                          |
| Antibody Type          | Secondary Antibody                                                                                                                                                                                                                                                                                       |
| Anwendungsbeschreibung | Precipitation assays. In immunoelectrophoresis use 2 µl or equivalent against 120 µl antiserum. In double radial immunodiffusion (Ouchterlony) use a rosette arrangement with 10 µl in a 3 mm diameter center well and 2 µl serum samples (neat and serially diluted) in 2 mm diameter peripheral wells. |
