Goat anti Human alpha-1 lipoprotein, Clone: [Polyclonal], Monoclonal NMB-GAHU/A1LP(HDL)

Artikelname	Goat anti Human alpha-1 lipoprotein, Clone: [Polyclonal], Monoclonal
Artikelnummer	NMB-GAHU/A1LP(HDL)
Hersteller Artikelnummer	GAHu/A1Lp(HDL)
Alternativnummer	NMB-GAHU/A1LP(HDL)
Hersteller	NordicMubio
Wirt	Goat
Kategorie	Antikörper
Produktbeschreibung	The reactivity of the antiserum is restricted to alpha-1 lipoprotein. In immunoelectrophoresis and radial immunodiffusion (Ouchterlony), using various antiserum concentrations against fresh normal human plasma a single precipitin line is obtained whi...
Klonalität	Monoclonal
Klon-Bezeichnung	[Polyclonal]
Puffer	Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added.
Quelle	Alpha-1 lipoproteins are completely different from beta-lipoproteins. In fresh serum only one alpha-1 lipoprotein exists immunologically, but after centrifugation, storage, freezing and thawing two types of alpha-1 lipoprotein with difference in mobility

Formel	Delipidated, heat inactivated, lyophilized, stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign proteins added.
Anwendungsbeschreibung	Precipitation assays. The lyophilized antiserum is shipped at ambient temperature and may be stored at +4C, prolonged storage at or below -20C. Reconstitute the lyophilized antiserum by adding 1 ml sterile distilled water. Dilutions may be prepared by adding phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance of the antiserum. Diluted antiserum should be stored at +4C, not refrozen, and preferably used the same day.
