| Kategorie                | Antikörper                                                                                                                                                                                                                                                      |
| Konjugation              | Biotin                                                                                                                                                                                                                                                          |
| Produktbeschreibung      | The reactivity of the antiserum is directed to the Fc subunit of the IgA molecule which expresses strict isotypic (class) specificity. It does not react with IgG, IgM and IgG/Fab or any non-Ig protein in mouse serum, as tested by immunoelectrophoresi...   |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                      |
| Klon-Bezeichnung         | [Polyclonal]                                                                                                                                                                                                                                                    |
| Puffer                   | Biotin-coupled purified hyperimmune goat IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity. It is reconstituted by adding 1 ml sterile distilled water, spun do |

|                        |                                                                                                                                                                                             |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quelle                 | Purified homogenous IgA isolated from mouse serum. Freund's complete adjuvant is used in the first step of the immunization procedure.                                                      |
| Formulierung           | Biotin                                                                                                                                                                                      |
| Formel                 | Biotin-coupled purified hyperimmune goat IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity. |
| Anwendungsbeschreibung | ELISA, Immunocytochemistry, Immunohistochemistry (paraffin), Dot blot, Immunoblotting.                                                                                                      |
