| Spezies Reaktivität              | Rat                                                                                                                                                                                                                                                           |
| Konjugation                      | Unconjugated                                                                                                                                                                                                                                                  |
| Format                           | Antiserum                                                                                                                                                                                                                                                     |
| Spezifität                       | IgG (Fc)                                                                                                                                                                                                                                                      |
| Minimale Kreuzreaktivität (MinX) | no cross-adsorbtion                                                                                                                                                                                                                                           |
| Produktbeschreibung              | The reactivity of the antiserum is directed to the Fc subunit of the IgG molecule including all subclasses. In immunoelectrophoresis and double radial immunodiffusion, using various antiserum concentrations against normal rat plasma and serum, a char... |
| Klonalität                       | Monoclonal                                                                                                                                                                                                                                                    |
| Klon-Bezeichnung                 | [Polyclonal]                                                                                                                                                                                                                                                  |

|                        |                                                                                                                                                                                                                                                                                                           |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Puffer                 | Delipidated, heat inactivated lyophilized stable whole serum No preservative added, as it may interfere with the antibody activity. Total protein and IgG concentration in the antiserum are comparable to those of pooled goat serum. No foreign proteins added                                          |
| Quelle                 | Purified normal IgG, including all known subclasses, isolated from pooled rat serum. Freund's complete adjuvant is used in the first step of the immunization procedure.                                                                                                                                  |
| Formel                 | Delipidated, heat inactivated lyophilized stable whole serum No preservative added, as it may interfere with the antibody activity. Total protein and IgG concentration in the antiserum are comparable to those of pooled goat serum. No foreign proteins added                                          |
| Antibody Type          | Secondary Antibody                                                                                                                                                                                                                                                                                        |
| Anwendungsbeschreibung | Precipitation assays. In immunoelectrophoresis use 2 µl or equivalent against 120 µl antiserum. In double radial immunodiffusion (Ouchterlony) use a rosette arrangement with 10 µl antiserum in a 3 mm diameter centre well and 2 µl serum samples (neat and diluted) in 2 mm diameter peripheral wells. |
