| Format                           | Antiserum                                                                                                                                                                                                                                                     |
| Spezifität                       | IgG+IgM+IgA+IgD (H+L)                                                                                                                                                                                                                                         |
| Minimale Kreuzreaktivität (MinX) | no cross-adsorbtion                                                                                                                                                                                                                                           |
| Produktbeschreibung              | The reactivity of the antiserum is directed to the heavy chains of immunoglobulin isotypes IgG, IgA, IgM and IgD. The antiserum also contains antibodies to common determinants and to the surface determinants of the common Fab as tested by immunoelect... |
| Klonalität                       | Monoclonal                                                                                                                                                                                                                                                    |
| Klon-Bezeichnung                 | [Polyclonal]                                                                                                                                                                                                                                                  |

|                        |                                                                                                                                                                                                                                                                                            |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Puffer                 | Delipidated, heat inactivated, lyophilized stable whole serum. No preservative added, as it may interfere with the antibody activity. Total protein and IgG concentration in the antiserum are comparable to those of pooled goat serum. No foreign proteins ad                            |
| Quelle                 | Purified polyclonal mouse IgG and pools of homogenous IgG, IgA, IgM and IgD. Freund's complete adjuvant is used in the first step of the immunization procedure.                                                                                                                           |
| Formel                 | Delipidated, heat inactivated, lyophilized stable whole serum. No preservative added, as it may interfere with the antibody activity. Total protein and IgG concentration in the antiserum are comparable to those of pooled goat serum. No foreign proteins a                             |
| Antibody Type          | Secondary Antibody                                                                                                                                                                                                                                                                         |
| Anwendungsbeschreibung | Immunoprecipitation. In immunoelectrophoresis use 2 µl or equivalent against 120 µl antiserum. In double radial immunodiffusion use a rosette arrangement with 10 µl antiserum in a 3 mm diameter centre well and 2 µl serum samples (neat and diluted) in 2 mm diameter peripheral wells. |
