Application Verdünnung	1 : 100 (IL), 1 : 1000-1 : 5 000 (WB)
Anwendungsbeschreibung	VERY IMPORTANT: Please, do not heat up your samples above 70C as this may cause H⁺ATPase to precipitate, and there will be no signal on your Western Blot. Before SDS-PAGE, centrifuge your samples at room temperature at 10 000 rpm/1 min to remove any aggregates. H⁺ATPase will be less abundant in mature roots and leafs, and therefore detection may require use of very sensitive reagents.
