| Immunogen                | Molt 13 T cell line                                                                                                                                                                                                                                            |
| Produktbeschreibung      | CD98 exists as a heterodimer containing a disulphide-linked glycosylated heavy chain and a non-glycosylated light chain. It is a member of the solute carrier family and encodes a cell surface, transmembrane protein. The protein exists as the heavy cha... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                     |
| Klon-Bezeichnung         | [UM7F8]                                                                                                                                                                                                                                                        |
| Molekulargewicht         | Heterodimer (125kDa) made of a disulfide-linked glycosylated heavy chain of approximately 80-90kDa and a non-glycosylated light chain                                                                                                                          |
| Isotyp                   | IgG1                                                                                                                                                                                                                                                           |

|              |                                                                                                                                                                              |
