| Produktbeschreibung      | Calmodulin (CaM) is a multifunctional intermediate calcium-binding messenger protein expressed in all eukaryotic cells. It is an intracellular target of the secondary messenger Ca <sup>2+</sup> , and the binding of Ca <sup>2+</sup> is required for the activation of Calmoduli... |
| Molekulargewicht         | 16.8 KDa                                                                                                                                                                                                                                                                               |
| NCBI                     | 0                                                                                                                                                                                                                                                                                      |
| Reinheit                 | Greater than 95% as determined by reducing SDS-PAGE                                                                                                                                                                                                                                    |
| Anwendungsbeschreibung   | Always centrifuge tubes before opening.Do not mix by vortex or pipetting.It is not recommended to reconstitute to a concentration less than 100µg/ml.Dissolve the lyophilized protein in distilled water.Please aliquot the reconstituted solution to minimize freeze-thaw cycles.     |
