| Hersteller               | MedchemExpress                                                                                                                                                                                                                                                |
| Kategorie                | Proteine/Peptide                                                                                                                                                                                                                                              |
| Produktbeschreibung      | ADAM9, a metalloprotease, cleaves and releases TEK, KDR, EPHB4, CD40, VCAM1, and CDH5, playing a pivotal role in tumorigenesis and angiogenesis. It regulates cell motility through integrin interactions, mediates cell-cell and cell-matrix interactions... |
| Molekulargewicht         | Approximately 73 kDa                                                                                                                                                                                                                                          |
| Reinheit                 | 95.00                                                                                                                                                                                                                                                         |
| Formel                   | 8754(Gene_ID)Q13443-1 (A29-D697)(Accession)                                                                                                                                                                                                                   |
| Anwendungsbeschreibung   | MCE Product type: Recombinant Proteins                                                                                                                                                                                                                        |
