| Reinheit                 | > 95 % as determined by reducing SDS-PAGE.                                                                                                                                                                                                                        |
| Formulierung             | Lyophilized from a 0.2 µm filtered solution of 50 mM Tris-HCl, 100 mM Glycine, pH7.5. Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manu |
| Sequenz                  | Ile20-Pro517                                                                                                                                                                                                                                                      |
| Target-Kategorie         | CSF1R,CD115                                                                                                                                                                                                                                                       |
