| Immunogen                | Recombinant Human Alpha-2-macroglobulin protein (1216-1467AA)                                                                                                                                                                                                 |
| Konjugation              | Unconjugated                                                                                                                                                                                                                                                  |
| Produktbeschreibung      | Is able to inhibit all four classes of proteinases by a unique trapping mechanism. This protein has a peptide stretch, called the bait region which contains specific cleavage sites for different proteinases. When a proteinase cleaves the bait region,... |
| Klonalität               | Polyclonal                                                                                                                                                                                                                                                    |
