Anwendungsbeschreibung	This Human Amiloride-sensitive sodium channel subunit alpha (SCNN1A) ELISA Kit employs a two-site sandwich ELISA to quantitate SCNN1A in samples. An antibody specific for SCNN1A has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any SCNN1A present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for SCNN1A is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of SCNN1A bound in the initial step. The color development is stopped and the intensity of the color is measured.
