Anwendungsbeschreibung	This Mouse Trinucleotide repeat-containing gene 6C protein (TNRC6C) ELISA Kit employs a two-site sandwich ELISA to quantitate TNRC6C in samples. An antibody specific for TNRC6C has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TNRC6C present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TNRC6C is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TNRC6C bound in the initial step. The color development is stopped and the intensity of the color is measured.
