Anwendungsbeschreibung	PluriSin-1 is an inhibitor of stearoyl-coA desaturase (SCD1). PluriSin-1 was able to selectively eliminate human pluripotent stem cells (hPSCs) while not affecting a large array of progenitor and differentiated cells. ¹ The ability to eliminate potentially tumorigenic undifferentiated cells is important for increasing the safety of hPSC-based treatments. PluriSin-1 has been used to successfully eliminate tumorigenic cells in cardiomyocytes ² and chondrogenic cells ³ .
