Anwendungsbeschreibung	Dabrafenib is a selective inhibitor of mutant B-RafV600E (IC50 = 0.8 nM), with 4- and 6-fold reduced potency against wild type B-Raf and c-Raf (IC50 = 3.2 and 5 nM, respectively). ¹ Has been in clinical trials in patients with B-RafV600E metastatic melanoma and other solid tumors. Endoplasmic reticulum stress and autophagy are induced in melanoma cells after treatment with dabrafenib and protect cells from dabrafenib toxicity. ² Induces epithelial differentiation in BRAF-mutant colorectal cancer cells. ³
