Product Datasheet

Pemetrexed, CAS [[357166-29-1]] **FBM-10-2162**

Artikelname	Pemetrexed, CAS [[357166-29-1]]
Artikelnummer	FBM-10-2162
Hersteller Artikelnummer	10-2162
Alternativnummer	FBM-10-2162-10MG,FBM-10-2162-50MG
Hersteller	Focus Biomolecules
Kategorie	Biochemikalien
Produktbeschreibung	Antifolate, antitumor agent...
Molekulargewicht	597.49
Reinheit	98% by TLC and HPLC, NMR (Conforms)
Formulierung	White solid
CAS Nummer	[357166-29-1]
Formel	C20H19N5O6 2Na 7H2O

Anwendungsbeschreibung	Pemetrexed is a multi-targeted antifolate with antitumor activity. It potently inhibits folate-dependent enzymes involved in both purine and pyrimidine synthesis including thymidylate synthase ($K_i = 109 \text{ nM}$), dihydrofolate reductase ($K_i = 7 \text{ nM}$), glycinamide ribonucleotide formyltransferase ($K_i = 9.3 \text{ }\mu\text{M}$), and aminoimidazole carboxamide ribonucleotide formyltransferase ($K_i = 3.6 \text{ }\mu\text{M}$).¹ A clinically useful anticancer agent.² Indirectly activates the metabolic kinase AMPK and consequently influences the mTORC1 pathway in human carcinomas.³ Activation of AMPK is associated with pemetrexed resistance.⁴ Induces G0/G1-phase cell cycle arrest in esophageal squamous cell carcinoma cells.⁵
