| Formel                   | C <sub>24</sub> H <sub>25</sub> FNO <sub>4</sub> Na                                                                                                                                                                                                                                                                                                                                         |
| Anwendungsbeschreibung   | Potent inhibitor of HMG-CoA reductase, IC <sub>50</sub> =40-100 nM.1 Clinically useful, orally active antihypercholesterolemic agent. Inhibits vascular smooth muscle proliferation, IC <sub>50</sub> =70 nM.2 Displays antineuroinflammatory activity.3 Prevents lung adenocarcinoma bone metastasis by triggering autophagy.4 Attenuates cell proliferation in hepatocellular carcinoma.5 |
