Anwendungsbeschreibung	Immunomodulator. Inhibits secretion of IL-1beta, TNF-alpha, and IL-10 from murine macrophages stimulated with LPS and spares T cell function.1 Ameliorates the course of acute and chronic immunoinflammatory conditions such as carrageenan-induced pleurisy, LPS-induced lethality and type II collagen-induced arthritis in mouse models.1 Prevents spontaneous and accelerated forms of autoimmune diabetes in a NOD mouse model.2 Modulates genes involved in LPS-induced Toll-like receptor 4 activation in a mouse Lupus model.3 Displays protective effects in particulate matter-induced acute lung injury by blocking TLR4 signaling.4
