Anwendungsbeschreibung	Pexidartinib (1029044-16-3) is a potent and selective dual inhibitor of CSF1R (IC₅₀ = 20nM) and c-KIT (IC₅₀ = 10nM).¹ Inhibition of CSF1R with Pexidartinib resulted in a reprogrammed immune microenvironment that fosters antitumor immunity in a CD8⁺ T-cell-dependent manner in a breast cancer model.¹ CSF1R recruits tumor-infiltrating myeloid cell that suppress tumor immunity - Pexidartinib increased the efficacy of adoptive cell immunotherapy (ACT) in a mouse melanoma model by inhibiting the intratumoral accumulation of immunosuppressive macrophages.^{2,3} It has also been shown to increase the efficacy of anti-PD-14,5 and DC immunotherapy ⁶.
