Anwendungsbeschreibung	11a is an agonist of the photoreceptor-specific nuclear receptor (NR2E3, PNR, RNR), found in rod photoreceptor cells (EC50 = 141 nM β -lactamase assay, 35 nM NCOR assay). ¹ An interesting tool for targeting age-related macular degeneration. 11a was able to increase p53 activation in uterine cancer tumors suggesting NR2E3 agonism as a new anti-cancer strategy. ² A previous study found that cytotoxicity of 11a was due to G1/S phase cell cycle arrest rather than NR2E3 agonism. ³
