Anwendungsbeschreibung	Dual inhibitor of Ras and ARF6 discovered by screening a library of over 115,000 small molecules employing an endosomal BRET-based assay with the prototypical GPCR angiotensin II type 1 receptor (AT1R) seeking to identify inhibitors of receptor trafficking. IC ₅₀ =7 and 0.7 μ M for ARF and Ras respectively with no inhibition of Rac/Cdc42 and Rho up to 100 μ M. It blocks agonist-mediated internalization of AT1R and other GPCRs. It also potently inhibits agonist-induced ERK1/2 signaling by GPCRs and MAPK and AKT signaling by EGFR (IC ₅₀ =4-5 μ M) and prevents cancer cell proliferation. Rasarfins direct action on Ras was also verified using purified H-Ras in an in vitro GEF exchange assay. ¹
