| Produktbeschreibung      | This Recombinant Hepatitis B virus genotype D subtype ayw Large envelope protein (S) spans the amino acid sequence from region 2-389aa. Purity: Greater than 85% as determined by SDS-PAGE....                                     |
| Molekulargewicht         | 44.1 kDa                                                                                                                                                                                                                           |
| UniProt                  | <a href="#">P03138</a>                                                                                                                                                                                                             |
| Puffer                   | If the delivery form is liquid, the default storage buffer is Tris/PBS-based buffer, 5%-50% glycerol. If the delivery form is lyophilized powder, the buffer before lyophilization is Tris/PBS-based buffer, 6% Trehalose, pH 8.0. |
| Quelle                   | Hepatitis B virus genotype D subtype ayw (isolate France/Tiollais/1979) (HBV-D)                                                                                                                                                    |
| Reinheit                 | Greater than 85% as determined by SDS-PAGE.                                                                                                                                                                                        |
| Formulierung             | Liquid or Lyophilized powder                                                                                                                                                                                                       |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Anwendungsbeschreibung | Biological Origin: Hepatitis B virus genotype D subtype ayw (isolate France/Tiollais/1979) (HBV-D). Application Notes: We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference |
