Reinheit	Recombinant RFP was synthesized with an amino terminal 6XHIS tag and was expressed in E. coli. A 3 step process was used to purify the protein: a partitioning separation using t-butanol, followed by hydrophobic interaction chromatography (HIC), and lastly IMAC nickel chromatography. Analysis by SDS-PAGE resulted in a pattern consistent with purified RFP and was estimated to be greater than 90% pure.
Formulierung	Liquid (sterile filtered)

Anwendungsbeschreibung	Application Notes: RFP Control is suitable as a control for polyclonal or monoclonal Anti-RFP in immunological assays. The molecular weight of RFP (calculated) is 27 kDa, but in a gel it is expected to run at approximately 28-30 kDa. Recombinant RFP has been tested in SDS-page, dot blot, and western blot
