Anwendungsbeschreibung

Solubility: It is recommended to add 0.1M acetate buffer pH 4.0 to prepare a working stock solution of approximately 0.5mg/ml and let the lyophilized pellet dissolve completely. For conversion into higher pH value, we recommend intensive dilution by relevant buffer to a concentration of 10µg/ml. In higher concentrations the solubility of this antigen is limited. ULBP4 is not sterile! Please filter the product by an appropriate sterile filter before using it in the cell culture.
