Anwendungsbeschreibung

Solubility: It is recommended to reconstitute the lyophilized Interleukin-1 alpha in sterile 18MO-cm H₂O not less than 100µg/ml, which can then be further diluted to other aqueous solutions.

Biological Activity: The ED₅₀ as determined by the dose-dependant stimulation of D10S cells is < 0.03 ng/ml.

Application Notes: Protein content: Protein quantitation was carried out by two independent methods:1. UV spectroscopy at 280 nm using the absorbency value of 0.669 as the extinction coefficient for a 0.1% (1mg/ml) solution. This value is calculated by the PC GENE computer analysis program of protein sequences (IntelliGenetics). 2. Analysis by RP-HPLC, using a standard solution of IL-1 as a Reference Standard
