| Spezies Reaktivität      | Mouse                                                                                                                                                                                                                                                         |
| Immunogen                | A partial length recombinant ICAD protein (amino acids 111-331) was used as the immunogen for this antibody.                                                                                                                                                  |
| Produktbeschreibung      | ICAD/DFF45 is an inhibitor of the caspase-activated DNase (CAD, DFF40). DNA fragmentation factor (DFF) consists of two subunits, a 40 kDa caspase-activated nuclease (DFF40) and a 45 kDa inhibitor (DFF45). In proliferating cells CAD or DFF40 forms a c... |
