| Spezies Reaktivität      | Human                                                                                                                                                                                                                                                         |
| Immunogen                | Full length recombinant Histone H2A.x protein was used as the immunogen for this antibody.                                                                                                                                                                    |
| Produktbeschreibung      | Histones are major chromatin proteins that wrap DNA to form nucleosome particles. Each nucleosome core particle consists of approximately 146 bp DNA wrapped by an octamer containing 2 molecules each of histones H2A, H2B, H3, and H4. Histone H1 sits o... |
