Product Description	EDG-1 belongs to a family of G-protein coupled receptors whose ligands are lysophospholipids. The ligand for EDG-1 is sphingosine-1-phosphate. There are 8 known members of the EDG receptor family and they are implicated in mediating growth related ef...
Concentration	See vial for concentration
Isotype	IgG
UniProt	P21453

Buffer	Provided as solution in phosphate buffered saline with 0.08% sodium azide
Purity	Ammonium Sulfate Precipitation
Form	Unconjugated
Formula	Provided as solution in phosphate buffered saline with 0.08% sodium azide
Application Notes	Detects EDG1 receptors at concentration of 5-10 µg/ml by Western blot using a human EDG1 receptor transfected cell line. Detects an approximately 44 kDa band in RH7777 cells transfected with full length human EDG1. Due to low expression of EDG receptors, we recommend use of Pierce Femto Signal substrate for western blot development. Optimal concentration should be evaluated by serial dilutions.
