| Host                       | Rabbit                                                                                                                                                                                                                                                           |
| Category                   | Antikörper                                                                                                                                                                                                                                                       |
| Product Description        | The defined antibody reactivity is restricted to alpha-2 antiplasmin as tested at the level of sensitivity of immuno-precipitation techniques. A single precipitin line is obtained in bidimensional electrophoresis, immunoelectrophoresis and double rad...    |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                       |
| Clone Designation          | [Polyclonal]                                                                                                                                                                                                                                                     |
| UniProt                    | <a href="#">P08697</a>                                                                                                                                                                                                                                           |
| Buffer                     | Delipidated, heat inactivated, lyophilized, stable whole serum. No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal rabbit serum. No foreign proteins added. Reconstitute the lyophilized ant  |
| Source                     | Alpha-2 antiplasmin is a single-chain glycoprotein with a molecular weight of about 65,000. The normal concentration in human plasma is 60 µg/ml. Platelets contain significant amounts of the protein, which is released along with platelet factor 4, followin |

|                   |                                                                                                                                                                                                                                |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Formula           | Delipidated, heat inactivated, lyophilized, stable whole serum. No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal rabbit serum. No foreign proteins added. |
| Application Notes | Precipitation assays. In electroimmunodiffusion the amount of antiserum required in the agarose gel is usually between 1 and 2% depending on the test arrangement.                                                             |
