| Conjugation                | Unconjugated                                                                                                                                                                                                                                                  |
| Format                     | Antiserum                                                                                                                                                                                                                                                     |
| Target Specificity         | IgG+IgM+IgA+IgD+IgE (H+L)                                                                                                                                                                                                                                     |
| Cross-Adsorption (MinX)    | no cross-adsorbtion                                                                                                                                                                                                                                           |
| Product Description        | The reactivity of the antiserum is directed to the heavy chains of immunoglobulin isotypes IgG, IgA, IgM, IgD and IgE. The antiserum contains antibodies to common determinants and to the surface determinants of the common Fab as tested by immunoelect... |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                    |
| Clone Designation          | [Polyclonal]                                                                                                                                                                                                                                                  |

|                   |                                                                                                                                                                                                                                                                                             |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Buffer            | Delipidated, heat inactivated, lyophilized stable whole serum. No preservative added, as it may interfere with the antibody activity. No foreign protein added. Total protein and IgG concentration in the antiserum are comparable to those of pooled rabbit s                             |
| Source            | Purified polyclonal mouse IgG and pools of homogenous IgG, IgA, IgM, IgD and IgE. Freund's complete adjuvant is used in the first step of the immunization procedure.                                                                                                                       |

Total protein and IgG concentration in the antiserum are comparable to those of pooled rabbit                               |
| Antibody Type     | Secondary Antibody                                                                                                                                                                                                                                                                          |
| Application Notes | Precipitation assays. In immunoelectrophoresis use 2 µl or equivalent against 120 µl antiserum. In double radial immunodiffusion use a rosette arrangement with 10 µl antiserum in a 3 mm diameter centre well and 2 µl serum samples (neat and diluted) in 2 mm diameter peripheral wells. |
