| Conjugation                | Unconjugated                                                                                                                                                                                                                                                  |
| Product Description        | The protein encoded by this gene has a long and a short form, generated by use of alternative translational start codons. The long form is expressed in steroidogenic tissues such as testis, where it converts cholesteryl esters to free cholesterol for... |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                    |
| Clone Designation          | [ARC1657]                                                                                                                                                                                                                                                     |
| Molecular Weight           | 117kDa                                                                                                                                                                                                                                                        |

|                    |                                                                                                                                                                                                                                                                   |
