| Category                   | Proteine/Peptide                                                                                                                                                                                                                                               |
| Product Description        | MASP2 Protein, a serum protease, plays a pivotal role in activating the complement system by cleaving C2 and C4 upon auto-catalytic cleavage. This activation leads to the formation of C3 convertase, a crucial step in initiating the complement cascade ... |
| Molecular Weight           | Approximately 18-20 kDa&27-30 kDa, based on SDS-PAGE under reducing conditions.                                                                                                                                                                                |
| Formula                    | 17175(Gene_ID)Q91WP0 (T287-F685)(Accession)                                                                                                                                                                                                                    |
| Application Notes          | MCE Product type: Recombinant Proteins                                                                                                                                                                                                                         |
