| Category                   | Molekularbiologie                                                                                                                                                                                                                                             |
| Product Description        | Ceramides are bioactive sphingolipids which induce apoptosis in cells. Ceramidases (CDase), which hydrolyze the fatty acid chain, keep ceramide levels in check and have been proposed as a target for small-molecule inhibitors for anti-cancer therapy. ... |
| Application Notes          | Categories: Biochemical Reagents. Related: Inhibitor, Sphingolipid.<br>Ship 1 : Shipping Temp. Ship 2: Ambient Temperature                                                                                                                                    |
