| Product Description        | The RayBio Carbamylated Fibrinogen Quantitative ELISA kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of Human Carbamylated Fibrinogen (Fgn).... |
| Range                      | 0.41 ng/mL - 100 ng/mL                                                                                                                                                                 |
| Sensitivity                | 0.15 ng/mL                                                                                                                                                                             |
| NCBI                       | <a href="#">2244</a>                                                                                                                                                                   |
| Form                       | 96-well Microplate                                                                                                                                                                     |
| Samples                    | Cell Lysates, Tissue Lysates                                                                                                                                                           |
| Target                     | Fibrinogen (FGA)                                                                                                                                                                       |
| Application Notes          | Colorimetric                                                                                                                                                                           |
