Application Notes	<p>The Fibro Prisma units have a binding capacity of approximately 30 mg/mL at residence times of 1.5 to 7.5 seconds. Good capacity, low ligand leakage, plus the rigid matrix, make Fibro Prisma units ideal for the purification of monoclonal antibodies. The ready to use format is well suited for preparative purifications when short cycle times, high productivity and flexibility is important. Because of the high flow rates and the high throughput, the units are especially useful for cell cultures with low expression levels. The disposable/single batch format eliminates the need for sanitization.</p>
