| Product Description        | Dopamine receptor D2 (DRD2) is G protein coupled receptor (GPCR) that belong to the D2like dopamine receptor family, couple to Gi to reduce adenylyl cyclase. DRD2s are expressed in different neuronal cell types within the striatum, dopamine binding le... |
| Molecular Weight           | 48.3 kDa                                                                                                                                                                                                                                                       |
| Tag                        | N-Flag & C-10*His                                                                                                                                                                                                                                              |
