| Target                     | DLL4                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Application Notes          | ActiveMax Human DLL4 µBeads, premium grade (for cells, 20 µm) is designed to synergistically activate Notch signaling in hematopoietic stem/progenitor cells (HSPCs). The synergistic interactions between Notch ligand Delta-like 4 and VCAM-1 are leveraged to enhance Notch signaling to support efficient T-cell lineage commitment, so the beads is recommended to use for in vitro production of induced pluripotent stem cell derived T cells. |
