| Product Description        | General Substance P (SP) ELISA Kit...                                                                |
| Range                      | 78.13-5000pg/mL                                                                                      |
| Sensitivity                | 46.88 pg/mL                                                                                          |
| Samples                    | serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids |
| Target                     | SP                                                                                                   |

Application Notes

Application Notes: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with Substance PKit(SP) protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Substance PKit(SP). Next,Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm 10nm. The concentration of Substance PKit(SP) in the samples is then determined by comparing the OD of the samples to the standard curve
