| Immunogen                  | A partial length recombinant 14-3-3 Zeta protein (amino acids 48-245) was used as the immunogen for this antibody.                                                                                                                                            |
| Product Description        | 14-3-3zeta is a central cellular hub protein regulating multiple signaling pathways involved in cancer development, progression and therapeutic resistance. It is linked to endoplasmic reticulum (ER) function in neurons, with reduced levels provoking ... |
