| Species Reactivity         | Human, Mouse                                                                                                                                                                                                                                                  |
| Immunogen                  | A partial length recombinant Importin-9 protein (amino acids 740-1,041) was used as the immunogen for this antibody.                                                                                                                                          |
| Product Description        | Improtin-9 is a member of the Importin family of proteins that serves as a receptor for nuclear transport by identifying nuclear localization sequence (NLS) in proteins. It serves as receptor for nuclear localization signals (NLS) and is thought to m... |
