| Format                     | IgG                                                                                                                                                                                                                                                           |
| Target Specificity         | IgM (μ)                                                                                                                                                                                                                                                       |
| Cross-Adsorption (MinX)    | no cross-adsorbtion                                                                                                                                                                                                                                           |
| Product Description        | The reactivity of the antiserum is directed to the Fc subunits of the IgM molecule which expresses strict isotypic specificity. The conjugate does not react with any non-Ig protein in human serum, as tested by immunoelectrophoresis and double radial ... |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                    |
| Clone Designation          | [Polyclonal]                                                                                                                                                                                                                                                  |

|                   |                                                                                                                                                                                                                                                                  |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Buffer            | FITC-coupled purified hyperimmune swine IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity. It is reconstituted by adding 1 ml sterile distilled water, spun down |
| Source            | Purified normal IgM isolated from pooled human serum. Freund's complete adjuvant is used in the first step of the immunization procedure.                                                                                                                        |
| Form              | FITC                                                                                                                                                                                                                                                             |
| Formula           | FITC-coupled purified hyperimmune swine IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity.                                                                       |
| Antibody Type     | Secondary Antibody                                                                                                                                                                                                                                               |
| Application Notes | ELISA, Immunocytochemistry, Immunohistochemistry (frozen), (In)direct immunofluorescence.                                                                                                                                                                        |
